What is Geocaching?

Geocaching is a real-world, outdoor treasure hunting game using GPS-enabled devices. Participants navigate to a specific set of GPS coordinates and then attempt to find the geocache (container) hidden at that location. Geocaching is quickly becoming a popular outdoor adventure game among all ages and ability levels. It combines location-based gaming, social networking, treasure hunting, GPS navigation, and outdoor recreation. Geocaching is an activity that lets you explore the great outdoors--parks, nature trails, or simply the city routes around your home or school to find the secret cache with a hand held GPS unit.

What are the benefits?

The benefits of geocaching go far beyond finding the “secret caches”, although that’s fun too! Geocaching encourages getting outside and “in motion” — many of the geocaches are accessible by walking, biking, or for the more adventurous types by canoe or kayak.

There are lots of ways to get in on the fun! Geocaching can help to:

- get us outdoors to experience nature, refresh their mind and increase energy
- encourage exploration in parks, nature trails, cities, towns
- increase physical activity levels by walking, rolling, biking, hiking, etc.
- promote social interaction while being physically active
- encourage all abilities to participate
- can link activity and nature with education
- promote respect for nature and the environment
